

Participant Instructions

Attendance	Attend both Part 1 and Part 2 for the full workflow. Part 2 builds on the draft you create in Part 1. Each part is also valuable on its own if scheduling only allows one.
Laptop	Bring your own laptop or tablet with reliable internet access. Wi-Fi will be provided in the session room.
AI account	We recommend ChatGPT Plus or Claude (claude.ai) for the best experience. Google Gemini and Microsoft Copilot also work. Free-tier accounts may have usage limits that restrict participation in exercises—if possible, set up a paid account before the session.
Research idea	Come prepared with a research idea or ongoing project you would like to develop into a grant proposal draft. If you don't have a project yet, no problem—we will provide hepatology research scenarios to work with during the exercises.
Prior experience	No prior AI experience is required. The workshop is designed for researchers at all levels of familiarity with AI tools.
Admission	First-come, first-served—no pre-registration. Seating is limited to 20 participants. Arrive early to secure your place.
Downloads	No files need to be downloaded in advance. All materials, templates, and prompt libraries will be distributed during the session.
